

Cush Wind Farm is a proposed wind energy development within the townland of Cush, Co. Offaly

A temporary 80 meter met mast has been installed on the site to collect wind speed, direction, temperature, humidity and air pressure, which will be used to predict the energy that the wind farm can produce on the site.

An application has recently been submitted to extend the metmast to 100meters & to retain the mast on the site for the coming years.

The proposed development is being designed to the latest best industry standards and we will be appealing to local residents in Q4 of 2022 to have their say so as to maximise the project benefits to the neighbouring community.

In the interim, if you have any queries on this metmast application or indeed any queries at this point of the design stage, please contact our dedicated Community Liaison Officer:

Deirdre Keegan on 087 1163978
